Protein Sequence Searches - February 2005

Il of the sequence databases on ABSS have recently been updated.

- permanent accession numbers. The new UniProt record may not contain the previous temporary numbers from the most recent version of UniProt. These sequences have been assigned new Please note that the curators of the UniProt database have purged some temporary accession accession number.
- extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein If you encounter an accession number from an older search run against UniProt (results file Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtm

If you have any questions regarding this information or your results, please contact any STIC searcher

When submitting sequence search results for scanning into IFW, please members of the public who may encounter UniProt temporary accession include a copy of this attachment to assist any future Examiners or

Aymap position: 14932.33-14922.33
C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kapp hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into lan C;Superfamily: immunoglobulin c region; immunoglobulin homology cypuscial immunoglobulin homology cipuscial interchain (to alpha chain in another subunit) #status predicted F;339/Disulfide bonds: interchain (to alpha chain in another subunit) #status predicted F;339/Disulfide bonds: interchain (to alpha chain in another subunit) #status predicted
                                                                                                                                                                                                                                                                                   A; Molecule type: protein A; No. 201., P., 103-278, F., 280-295, D., 297-325, VV, 327-334, VV, 336-340 A; Residues: 1-92, P., 94-101, P., 103-278, F., 280-295, D., 297-325, VV, 327-334, VV, 336-340 A; Note: this chain does not form a disulfide bond with the light chain in the A; Note: the Azm(1) allotype appears to be a recombinant chain, being identical (except form a light alpha-1 chain from positions 279 to 340 C; Comment: The Azm(2) allotype sequence of the myeloma protein But is shown.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to the production of immunoglobulins in plants, wherein at least a portion of the glycans attached to the immunoglobulins lack fucose. The immunoglobulins produced can be of any class (i.e., IgG, IgA, IgB or IgD) and is especially an anti-herpes simplex virus (HSV) antibody or an anti-alphaVbeta3, alphaVbeta5 dual integrin cantibody. The invention also relates to constructs, plasmids and vectors for producing the immunoglobulins; transformed plant cells, calli, plant tissues and whole plants for producing the immunoglobulins, the immunoglobulins, methods for producing the immunoglobulins. The immunoglobulins may be use of such immunoglobulins. The immunoglobulins of the invention way be used to treat HSV infection or tumour angiogenesis. The invention contaminants such as viruses and elimination of pathogenic contaminants such as viruses and prions, with a simplified (i.e., non-plant-specific) glycosylation profile which reduces the risk that the immunoglobulin may not be functional in animals. The present sequence immunoglobulin may not be functional in animals. The present sequence represents the human antimates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ä
                                                                                                                                                                                                                                                                             Novel plant-produced immunoglobulin having glycopeptide or glycan profile with reduced fucosylation, useful for treating herpes simplex virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   314
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 85 FQGRVTITADESTSTAYMELSSLRSEDTAVYYCARDPF-----LHYWGQGTLVTV 134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for producing a polypeptide in a plastid comprising introducing a first recombinant nucleic acid molecule control that the plastid where the first recombinant nucleic acid molecule comprises a first polynucleotide which encodes at least one polypeptide. The method of the invention may be useful for producing polypeptides in chloroplasts, specifically antibodies and antibody chimera that bind tetanus toxin or a herpes simplex virus (HSV). The polynucleotides and polypeptides may useful in producing transgenic plants. The current sequence is that of the chloroplast-codon-optimised HSV8-1sc anti-HSV antibody protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing polypeptides in chloroplasts, useful in producing antibodies, by introducing a first recombinant nucleic acid molecule comprising a first polynucleotide encoding at least one polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         254 SPASPTSPKVFPLSLCSTQPDGNVVIACLVQGFFPQEPLSVTWSESGQGVTARNFPPSQD

A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene

The method of the invention may be useful for producing polypeptides. The producing polypeptides in chloroplasts, specifically antibodies and antibody chimera that bind polypeptides may useful in producing transgenic plants. The current sequence is that of the chloroplast-codon-optimised single chain anti-HSV antibody protein of the invention.
                                                                             434
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LEOSGAEVKKPGSSVKVSCKASGGSFSSYAINWVRQAQGQGLEWMGGLMPIFGTTNYAQK 202

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel colypeptides. Also claimed is a polypeptide encoded by the polypeptide or peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide or the polynucleotide by contacting the polypeptide or peptide or with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide in an concept of or spring the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide of sa probe is useful as paramaceutical agents and many disease-related or proteins are useful as pharmaceutical agents and many disease-related of genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or call cregeneration. Membrane proteins, signal transduction-related proteins, creamcription-related proteins, signal transduction-related proteins, concoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The CDNA may be used to regulate the activity or expression of the invention. Note: Some of the sequence presented is a protein of the invention. Note: Some of the specification, but is based on sequence information supplied by the specification, but is based on sequence information supplied by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM01378 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM013759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaccutical agents. The present sequence represents a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QVQLVQSGAEVKKPGSSVRVSCKASGGTFSSYAISWVRQAPGQGLEWMGG11P1FGTANY

This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to CDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as antibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osceppathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polypeptide is a protein encoded by a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the Buropean Patent Office, Vienna Sub-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    318

The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a
                                                                                              SQDASGDLYTTSSQLTLPATQCLAGKSVTCHVKHYTNPSQDVTVPCPVPSTPPTPSPSTP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the production of immunoglobulins in plants, wherein at least a portion of the glycans attached to the immunoglobulins at lack fucose. The immunoglobulins produced can be of any class (i.e., igG, IgM, IgM, IgE or IgD) and is especially an anti-herpes simplex virus (HSV) antibody or an anti-alphavbeta3, alphavbeta5 dual integrin also relates to constructs, plasmids and vectors for producing the immunoglobulins; transformed plant cells, calli, plant tissues and whole plants for producing the immunoglobulins; the immunoglobulins methods for tradicting the immunoglobulins. The immunoglobulins of the invention may be use of such immunoglobulins of the invention may be use of such immunoglobulins of the invention may be used to treat HSV infection or tumour anglogenesis. The invention may be used to treat HSV infection or tumour anglogenesis. The invention contaminants such as viruses and elimination of pathogenic contaminants such as viruses and elimination of pathogenic contaminants such as viruses and elimination of pathogenic immunoglobulin may not be functional in animals. The present sequence represents the heavy chain (without tailplece) of the human anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel plant-produced immunoglobulin having glycopeptide or glycan profile with reduced fucosylation, useful for treating herpes simplex virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 AQKFQDRLTITADVSTSTAYMQLSGLTYEDTAMYXCARVAYMLEPTVTAGGLDVWGQGTL 120

This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to constant obtained by an oligo-capping method, where none of those clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as cartibodise, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these concerns and modulate expression of the CDNA molecules. As such, these concerns are useful for diagnostic markers or therapeutic targets for molecules are useful for diagnostic markers or therapeutic targets for concerns of motor functionary and sisease, parkinson's disease, and modulate services of moreopolicial disease. Alzheimer's disease, parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nocropic, antiparkinsonian, cytostatic and tranquiliser activities. This sequence is not given in the sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but the sequence of the invention but the sequence is not of the specification but the sequence of the specification but the sequence is not of the specification but the sequence of the specification but the sequence is not of the specification but the sequence of t
